

COPPER RANGE LIMITED

Copper-Uranium Targets - Olympic Domain Drilling Programme

As announced on 1 February 2007, Copper Range Limited plans to commence drilling within the Olympic Domain in mid-February 2007.

The first drill hole location has been selected to test the **Jenny** target which is approximately 40 km southeast of the world class copper and uranium Olympic Dam mine owned by BHP Billiton – see Figure 1 for the drill location.

Detailed gravity surveying and subsequent geophysical modelling has highlighted the **Jenny** anomaly as a priority drill target with potential for copper-gold-uranium mineralisation.
